Freezing Level*	1300m	1300m	1300m	1400m	1600m	1700m	1800m	1700m	1600m

**Level above which ground is expected to be frozen/snow is expected to settle.*

Meteorologist's View

Gusts of 40-50mph will give difficult walking conditions with a risk of being blown off balance. Navigation could be challenging with energy output significantly increased when walking into the wind. Feeling cold on summits which will be exacerbated by the strong winds, appropriate layers should be worn.

Forecast for Friday 05 Jul 2024

Weather: Low cloud and rain arriving overnight into southern areas of the Park with some uncertainly on the northern edge of the rainfall. This sinks back south again to leave a bright start to Friday morning, staying dry for much of the day before sunshine turns hazy as cloud thickens into the evening.

Maximum wind: Westerly 20-25mph gusting 30-35 becoming southwesterly 10-15mph gusting 20mph.

Chance of cloud-free hill tops above 800m: 20% overnight becoming 90% at the start of the day becoming 30% in the south by the end of the day.

Low Cloud and visibility: Extensive cloud obscuring hills over 500-600m overnight, clearing by the morning to see few amounts of fair weather cloud with the bases well above the summits. Cloud thickening by the evening, but bases still largely above summits.

Temperature: **Valleys:** Plus 9 Celsius becoming Plus 13 Celsius.
At 800m: Plus 3 Celsius becoming Plus 6 Celsius.
Freezing level: Above summits.
